TEXTILE ECOLOGY

Professional Catalogue

After the success of the two previous editions, it is my pleasure to present the **Third Edition** of our **PROFESSIONAL CATALOGUE**.

It is aimed at all industry professionals: Hotel Managers, Housekeepers, Purchasing Managers, F&B, Maitres, Decoration and fitting professionals, Architects, etc.

In its more than 100 pages, you will find everything you need with regard to new fashions, sizes, weights, quality characteristics, fabric compositions, and so on, for products for the bathroom, bedroom or restaurant.

The many high-quality photographs will help you to “**be able to feel**” our products and **view** some of the thousands of real arrangements we have undertaken.

Our international expertise enables us to act as **your guide for textiles** for the hotel and hospitality industry.

I hope that this catalogue will be of great use to you in your work. Always use products which are **high-quality, environmentally friendly**, respectful of **human rights** and which are **suitable for industrial washing processes**.

If you have any questions, please do not hesitate to contact us.

Yours,

Félix Martí Sempere

65x65cm (26"x 26")
70x70cm (28"x 28")

Pillow menu

When we lie down, our bodies relax and so we must choose pillows which best suit our posture. For **sleeping on your stomach**, the best choice is a soft and slender pillow.

For **sleeping on your back or if you change position a lot**, you should choose a pillow of medium firmness and thickness.

For **sleeping on your side**, you need a pillow which is sufficiently thick and firm.

Soft type

Ref. Ecológica and Ref. Ecológica Especial

These pillows come with softness and comfort guaranteed, thanks to their special filling.

Natural down and duck feathers grant a comfortable rest.

Down-feather pillows are not very firm, so they are suitable for those who sleep on their stomach.

Medium soft type

Ref. Polyfiber and Ref. Hibrison Ball

With great ability to spring back, they ensure a pleasant and comfortable rest.

Filled with hollow fibres, they are breathable and cool.

Firmer and thicker than feather pillows, they are suited to those who sleep on their back or who change posture frequently, as these pillows recover their shape quickly.

Firm type

Ref. Anatómica and Ref. Cervical

Compact pillows filled with a single piece of latex foam, suited for those who like to sleep with a high and firm support.

They retain their shape under pressure from the head and neck and so they are suitable for those who need to sleep on their side.

They offer complete adaptability to body shape, providing a restorative sleep, ideal for those with allergies.

Those with ref. Cervical also have an undulated shape which can adapt to the curvature of the neck.

Special type

Ref. Mariposa

Perfect for those with neck problems or injuries.

Filled with hollow fibre and with a special design (butterfly), they provide a restorative and healthy night's sleep, giving excellent support to the body.

TEXTILES SUITABLE FOR INDUSTRIAL WASHING

Resuinsa has certified its products as suitable for industrial laundering. A certification process that certifies that their textiles are suitable for industrial laundering, a process of very aggressive washing that creates extraordinary wear in any fabric.

It is the first company in the world to obtain this certification and again this indicates the their difference in relation to moving ahead of the requirements of the sector and putting themselves in the vanguard in relation to **R + D + R in the textile sector.**

Technical considerations

Items undergoing industrial washing should have high resistance and be able to maintain their qualities over time, being able to withstand the harsh conditions of industrial laundering, very different from domestic laundering. In the industrial laundry process, multiple factors are involved: the temperature of laundering, the detergents and the chemicals used, the temperature of drying and calendaring, ironing, etc.

The products used in the industrial laundering processes were detergents without a specific optical whiteness of the **UNE EN ISO 15797:2004** standard, as well as hydrogen peroxide (as a bleaching agent). The textile items were washed at the temperature of 75° C and subjected to various processes of drying and ironing.

In this study, we analyzed first the original textile items, subjecting them to physical and chemical analysis in order to collect data for later comparison with the data obtained after the laundering processes. Elements such as tensile strength, laminar mass, absorption capacity (only in the bathroom linen items), degree of whiteness (with the exception of the color articles) and degree of polymerization (DOP) were tested.

The textiles endured 50 cycles, consecutively, with their corresponding drying and ironing. After these cycles, the same physical and chemical analyses that were performed originally together with the dimensional stability analysis were carried out to confirm the useful life of the fabric.

If a company goes through these processes in good condition, it obtains a certification as suitable for industrial laundering.

“RESUINSA is a pioneer in R + D + R in contracted textiles and collaborates with the referenced Institutions in relation to innovations.”

Health

The textile article contains no substances that are harmful to health, and complies with the Oeko-tex 100 standard.

Respect for the environment

The article has been manufactured in production centres with an externally audited and certified environmental management standard, such as ISO 14001, Oeko-tex 1000, EMAS or their equivalent.

Respect for worker's human rights

Respect for the human and universal rights of workers according to the ILO (The International Labour Association) in the production centres where the article was manufactured, and audited and certified by an independent body with acknowledged prestige in its field, a code of conduct and social responsibility, such as SA8000 or equivalent.
